# Suitable Lenses for Reglazing Glasses by Bobby Barret

Article published on July 24th 2012 | Shopping

There are many types of lenses that can be used for reglazing. Glasses lens come in many forms; they can be single vision, bi-focal and vari-focal with + and â€“ signs on them. Minus lenses refer to distant viewing glasses whereas plus lenses are used for reading glasses but there may be exceptions to the rule. Minus lenses are thinner at the middle of the lens with its thickness increasing outwards to the edges. Plus lenses are thicker at the middle of the lens with a growing thinness towards the edges.

Understanding

It is common to have consumers worried about reglazing services as they are not familiar with the detailed process. However, the professional reglaze optical experts would be more than happy to enlighten the consumer on reglazing glasses or optical conditions if desired. It is to the consumerâ€™s benefit to understand the type of lens required personally so that the best vision can be secured to assist in the daily activities of life comfortably.

Professional reglaze glass experts would be able to expound on any reglaze process in simple terms to help the consumer feel confident about the glasses to be donned.

Pricing

Reglazing different types of lens would incur different pricing. Every individual is different; the eye condition of an individual is different from another. Hence, the prescriptions would be different and different types of lens would be recommended by optician. Sometimes the preference of the consumer plays a major role in pricing.

Some varifocals may be much cheaper than those offered at high street while there are free offerings as well. But, as the adage goes, â€œyou get what was paid forâ€•; free varifocals are available at certain opticians because their frames would have cost consumers â€˜an arm and a leg.â€• However, with reglaze services, consumers would know that they are only paying for their required lenses. They can save cost by reusing their current frame or any old pair which is still in good condition. Many consumers tend to change frames according to the trends and brands. It could be a fashion statement which they do not mind paying for.

Skills

But basically, varifocals can be quite costly if they are under the technologically advanced category. These are considered â€˜high end varifocalsâ€™ which require skilled reglazing experts to blend the varied power strengths accurately to achieve a higher viewing effectiveness.

Hence, varifocals require more skills as there is a variety of correction levels incorporated into one lens.
