Why Goliath Shoes is Your Utmost Safety Gear? by [Mysafetyhub](#)

Article published on August 23rd 2012 | [Shopping](#)

Goliath Footwear is a thriving British company that specializes in manufacturing workplace footwear. Established in 1880, they have been manufacturing boots that are used by military, fire, police and ambulance markets in the UK. Their brand does not only illustrate artistry but it also showcases inventiveness that offers an extensive collection of shoes without sacrificing the quality. Their brand for professional use offers users a layer of protection against mishaps that may happen in the markets for which they are designed. Here is a closer look as to why Goliath shoes are the ultimate safety work wear.

Offers significant protection

Considering the markets that it caters, Goliath shoes has a number of footwear designs that have built-in stainless steel plate into their soles. This technology ensures the prevention of sharp objects from penetrating the insides of the shoe. Soles of this kind may survive nail puncturing that has the strength of up to 1100 Newtons. They also have soles that can resist heat. These soles have been proven to endure without harm for a period of 60 seconds even if it comes into direct contact with heat of up to 300°C. Their antistatic footwear reduces the risk of spark ignition between 100kW and 1000mW. These features have been tested using European standards vis-à-vis ISO criteria. So having the shoes on is much similar to bringing your own first aid equipment to work.

Exceptionally durable

Wearers of this are given exceptionally durable footwear with the availability dual density rubber sole (DDR) injected on top of the uppers in their shoes. A secondary lower density mid-layer is supplemented to the outer tier. This sponge-like material promotes comfort, is shock absorbing and gives a light lightweight feel. The wear and tear of this safety work wear is guaranteed against the penetration and absorption of water with each hole is stitched to seal every part of the shoe. It is also guaranteed from being brittle against fuel in severe industrial environment.

Made with Comfort

It is made with L-Protection® that offers superior defense to the footwear's surface area. It also promotes greatest comfort and flexibility with the least amount of weight. With their full-length boots, ease is also given to users that can be likened to how a retinol skin care takes care of your skin. The insides of the boots even if they seemingly look uncomfortable keep the feet dry, warm and comfortable even if they are worn all day. The layers outside keeps the water from coming in but the insides allows perspiration to evaporate.
