Most Windows operating systems have a password feature that allows users to keep their work private from other users on the same system. Windows 7 is one such OS. A user having problems logging in to his account on a Windows 7 computer may want to try and reset Windows password. There are a couple of options available, such as using the Windows 7 installation disc or password reset disc created with a USB.

Windows 7 Installation Disc

Step 1: Insert the Windows 7 installation disc into the computer's CD-ROM drive and reboot the computer

Step 2: Select language settings, then click Next

Step 3: Click Repair your computer

Step 4: Choose the Restore your computer using a system image that you created earlier option, then click Next

Password Reset Disc

Step 1: Enter an incorrect password in the login screen, then click OK. When the message appears telling you the password is wrong, insert the Windows 7 password reset disc, then click Reset password.

Step 2: Click Next when the Welcome to Password Reset Wizard window appears.

Step 3: Select a disc drive, then click Next

Step 4: Type in a new password, then retype the new password, then enter a password hint. Click Next, then click Finish.

Windows Password Recovery Disc

Once you forgot Windows password, you can still reset it with a third party software. There are many kinds of password recovery toolkit on the market. So it is not an easy thing to choose a right and practical one. As I know, Windows Password Unlocker is easu-to-use and professional for Windows 7 password recovery. You can download this software and have a try right away. After that, you can reset the forgottenWindows 7 password with the disc by following the step-by-step guide.

Step 1: Download and installWindows Password Unlocker Professional

Step 2: Burn a bootable CD/DVD or USB.

Note: A USB flash drive is well-recommended as its tiny size but large space.

Step 3: Set your target computer to boot from CDRom or USB flash drive

Step 4: Insert the burned CD/DVD or USB flash drive into the locked computer. When a window pops up with all your account names, select the target one to reset its forgotten password.
