All You Want to Know About CD Replication and DVD Duplication by [Editor123](#)

Article published on January 11th 2012 | [Software](#)

If you are looking to produce copies of original CDs in bulk from a master CD within a very short duration then you should go for the process of CD replication. This process is mostly used in the industries of movies, music and software, where CDs need to be replicated daily in large numbers. Today is the age of information and so it has become very important to store data safely and securely. Data, when stored in a digital format not only becomes safe, but it can also be accessed by thousands of users or even more. As DVD-ROMs have a storage capacity that is 14 times more than that of CD ROMs, you must certainly opt for DVD duplication to store data in large quantities.

Process of CD Replication

In the process of CD replication, a source recording is used for creating the master process. The discs are pressed with the data, audio or video during the manufacturing and then it is pre embedded into the CD. If the requirement is more than 500 copies of, then a glass master or a stamper is produced. As replicated or manufactured discs usually have longer life expectancy than burnt or duplicated discs, people go for this technique if the requirement is large. The process can not only be completed within very short time, but you can also be assured of outstanding quality of CDs. When CDs are ordered in large quantities, the cost automatically drops and so you can get huge discounts from companies. With the advent of the internet, DVD replication duplication has become a very demanding process now-a-days.

Search online for reputed CD Replication company

The Net has really made it easy to search for a reliable as well as reputed company providing the service of CD replication. There are various companies that provide industry standard replicated CDs. You can also get graphics that are directly printed onto the surface of the CDs and DVDs. You can use the internet to explore the many options that are available in the process of replication and DVD duplication . So, go for best CD replication company for quality work.
