An Overview on SAP Integration by Terry Littrell

Article published on May 7th 2012 | Software

SAP is a leading business solutions provider. Originated in Walldorf, Germany in 1972, SAP has blossomed rapidly ever since then to a niche of having 100,600 SAP installations serving more than 41,200 companies, more than 25 industries in more than 120 countries with a majestic 10 million users around the world. This technology is the combined efforts of five ex-IBM engineers who as qualified engineers formulated their dream into a practical and functional concept, they then produced and perfected SAP.

Since it was developed in Germany, it was given a Germanic name Systeme, Andwendungen, Produkte in der Datenverarbeitung. To make it simple for majority of people to understand, it was then translated in English as Systems, applications, Products in Data Processing. SAP AG has grown to become the third largest software maker in existence not only in Germany but globally. The introduction of SAP R/2 in 1979 had been the reason behind its skyrocketing success. The very first SAP Integration was an overnight hit. SAP R2 ran on mainframes and went to penetrate the majority of large businesses in Germany. With its gradual expansion in other parts of Europe companies, the founders understood the growing acceptance and popularity of client-server architecture among businesses. With the development and release of SAP R/3 in 1992, SAP recognized and responded to that market. Business communities welcomed this intelligent program with open arms. In 1988, SAP R/3 evolved into an exceptional success like no other especially after expanding into the North American market. SAP R/3 grew from scratch to 44% in five years in worldwide sales. At the moment, America has thousands of employees and can claim to having many companies as clients.

Its numbers kept multiplying which is understandable for its sheer brilliance that led to its escalating popularity worldwide. Whereas its popularity results from the ability to not only be a brilliant application but also because of being versatile and adaptable to a wide variety of businesses. Many educational institutions are responding to the need of SAP Implementation i.e. SAP trained individuals who can successfully diagnose, select and implement the modules which would serve the best. The process of integration and functionality evolves over time. Yet, there are some programs that can be fully implemented within 18 months whereas some big corporations require a ten year commitment. Fragments of full scale SAP R/3 software become useful with time. Today, SAP has grown in leaps and bounds throughout the world and become famous with businesses, organizations, etc. Many people also opt for SAP Consulting services to understand its process and realize its significance. Hence, it is advisable to discuss your needs with professional SAP Consultants to know what your requirements are in a better way, before you go ahead with the implementation process.
