Attendance management system is the unique system to maintain attendance records by Mahesh Lodhaya

Article published on August 11th 2012 | Software

Every employer wants maintain some discipline in his organization. He wants his employees should be punctual when they come to office. Every business owner knows the importance of time. There are several options available in modern attendance tracking systems. Attendance management system helps to maintain the record of every employeeâ€™s entry and exit from office.

Many years back people were using handwritten time card or registers for keeping the entry and exit details of an employee but, as the technology has developed people have made attendance management system or time tracking system. This is Time tracking system helps us to maintain the arrival and departure of every employee. Apart from that, the human resource department of every medium or large scale companies requires the other details of employee about his leaves taken, half day and overtime calculation, Provident fund, Gratuity and other salary components for calculating the salary. Attendance monitoring software helps in generating all kinds of reports related to employeesâ€™ attendance and salary. It helps human resource department to maintain the data of every employee in compact software. Maintaining the same data manually in registers or books were causing an inaccurate data or inaccurate reports so to maintain the accuracy in data attendance tracking systems helps.

Payroll system is India is well-known since last many years, but traditional approach of maintaining or creating the payroll manually. Now a dayâ€™s payroll system in India is very much developed by many software companies by developing softwareâ€™s according to the requirement of the company considering the employee capacity and the details required in software.

The most valuable and important benefit of using payroll system in India is its ability to reduce time consuming administrative tasks, manual tasks and keeping paper records were resultant in more time for hands on work and workforce efficiency. Ideally time tracking system or payroll management software helps us to access the data from multiple sources like internally from companyâ€™s local server which is Non-Internet process, remote locations via Internet and mobile devices like mobile handsets and tablets. It helps the organization and the employees when the employees are spread across several locations and time zones, every person must be able to update and access the data from anywhere at any time. It reduces the risk of inaccuracy in maintaining the data and updates their activities on an ongoing basis. As the attendance software is used by many people of different age groups, different capacities and at any time it has to be developed in such a way that there shouldnâ€™t be any confusion or mismanagement in data entering, storing, accessing or printing.

Biometric time attendance system is the most accurate system developed so far by much software development company. Biometric uses to identify and verify that what you are doing is something you are authorized to do. It stores your finger prints, hand prints, iris patterns and even your voice which helps to ensure that you are same who say you are and let people know that, you have given permission to enter and exit whenever you are attempting to do. It stores more than 15000 employees or students data in the system. Biometric Time Attendance System helps an employer to understand and keep a track of each and every employeeâ€™s attendance and authentication.
