Article published on May 9th 2012 | Software

Cloud POS technology offers applications for retailers and their staffs. As the numbers of retail stores are growing each day, the use of POS software is also increasing. There is always a huge competition between various retailers in order to grow their business. Cloud POS helps retailers to stand one step ahead of their competitors.

Cloud POS is a point of sale software and in this technology, you do not need to install the software on each local machine, as it can be easily be accessed from any standard web browser. Cloud POS stores your data on secure cloud hosted servers in different data centres with real-time backup. This means that your data is always safe and available to you whenever you need it. Cloud Pos offers redundant servers that host POS application and all of its related services that makes your data more secure.

There are various advantages which provide strong reasons to use Cloud POS in any retail store:

1. It saves business time: It is faster and easy to use and also takes less time to operate.

2. It saves money: It saves maintenance cost, requires no specific hardware and is highly reliable and flexible; it allows you to use extra lanes only during period of high sales i.e. you may have to pay only for that period. For example if your retail store gets too much sales during Christmas, then you can get extra lanes for this period only.

3. It also provides security to data transactions.

4. Availability: Unlike other retail software, Cloud POS continue to operate even during network or internet outages.

5. It support complex retail business models, such as corporate-owned and franchise hybrids, dealer networks and/or concession stores.

It provides in-store mobility for high tech retailers who try to offer more personalised shopping experience to their customers. With online point of sale software, sales assistant can use it on mobile devices and can walk along with the customers to process their sales. Cloud pos software is far better than normal pos software because they do not force you to install large cumbersome programs in your computers and also do not compel you to update the software because all the updates are automatically done on POS server. Choosing Cloud POS is a smart decision to move your business ahead and take it to new heights. Cloud pos software is also very easy to learn and is a boon to retailers as it facilitates safe and secure business transactions.
