Article published on December 19th 2011 | Software

BI specialist can be appointed as a hard-core professional for the Company and can also be hired on contract. Whatever the medium, business solutions must meet their purpose. All you need is a specific understanding of reporting so that you are able to communicate your goals and requirements, properly.

Different types of reports have distinct reporting styles and the type of report chosen by the client or servicing company decides on the success of the project.

Detail reports: It is a list of all the information of interest. Detail reports are great tools to identify particular records and information-associated problems. Servicing company has an option to format and highlight the tables of interest.

Summary Reports: Important data is tabulated to form a summary of the data for example amount of time spent to accomplish a particular task in a week. There is an extensive range of options for the type of total summary â€“ like sum, average, percent, count and many more. Special summary report like Crystal Report consists of nineteen different types of summaries, customized as per industry. Results if wanted are displayed in tables to display clarity.

Drill-down Reports: When the report displays the data that makes-up the summary it is called drill-down report. It is a special summary report but with added feature. You just have to click-on Summary and the data displays below the summary.

Dashboards: A collection of summary reports viewed in graphical form is dashboard. It displays minimal numeric values and is designed to produce an overall view of a particular set of information. Business solutions are calculated based upon Dashboard reporting tool.

The above mentioned tools are used in conjunction or individually to meet business requirements from a particular set of information. Business IT consulting enables business regulators to take sound decisions and base their decisions on reliable data gathering.

Data Range plays a significant role in deciding upon the type of Business Intelligence report to be generated. For example BI-tool is of great significance to compare seasonal sales for a particular product. Comparison between seasonal sales is important depending upon the type of business you are in. Business Intelligence reports are customized as per the business it is produced for and as per the time period.

In the present competitive scenario, companies need to judge their performance precisely to understand the strengths and weaknesses and take appropriate measures to introduce efficiency in the system, thus enhancing return on investment ROI. Business IT consulting is fast and gives fast results based upon data collected and fed into the system.
