Article published on February 2nd 2012 | Software

Often you are at crossroads when confronted with computer related issues, especially when your system has gone beyond the warranty period. This is the crucial time when you need the most support but your brand says something else: â€œitâ€™s enough and we canâ€™t support it anymoreâ€• to goâ€™, â€˜whom to approachâ€™ and â€˜who will take the ownershipâ€™.

Those seeking answers to questions are at the right place. Go through this computer help article and find solutions to most of the impending issues. Learn how to make the optimum use of the PC diagnostics tools, and get the best out of the various built-in Windows features.

To begin with start with slow performance issues, which is the cause of irritation, most of the time. Well, be clear about the cause, first, and approach in the right way. There are many as suggested by computer support specialists but there is one genuine fact that the system memory has got corrupted or has been cluttered. Take a dip as the resultant situation can differ. Viruses and malware infection, corrupted driver, damaged or bloated registry settings, brewing up temporary Internet files, fragmented files, are a few to narrow down the search. Donâ€™t swing between probabilities and the fact, come clear, and take the right step.

Clear off viruses and malware: Check the status of the security software if you have any. Though the infection indicates that it was not compatible to block those, still you need to know. Remove it or reinstall it with update and perform a scan. However, if you donâ€™t have the one, then go with the Microsoft Security Essentials.

Create memory space: During program installation, you unknowing add broken files to your computer hard-disk. Frequent updates also share the space. Run Disk Defragmenter program to piece all your files back together again. It should be a regular practice.

Remove temporary files: Computer stores temporary files when you browse through webpages or work on files in programs, such as Microsoft Word. On long run, your computerâ€™s get seek with these, and tend to slow down. Use the Windows Disk Cleanup tool to rid your computer of these unneeded files and to help your PC run faster.

Errors or issues related to product activation, software update, audio and video, Internet connectivity, network sharing may also loom. Peripherals may also behave erratically. Computer problems can be simple or complex, frequent or intermittent. Windows 7 included Action Center that works as a pulse of your system, and brings all maintenance and security features (Windows Error Reporting, Windows Defender, and User Account Control) at one platform; you can interpret the notifications that are flashed, and proceed ahead to fix related issues. If you donâ€™t want those alerts to baffle you computing then turn it off from the Action Center settings. Device Manager is the best location to know the status of your drivers. Any incompatibility or issues will be notified here. You can reinstall or update driver as per choice to fix computer problems.

Remote computer support comes easy, and you may call the one which is reliable. Have a complete overview of their services and policies before you actually break the ice.
