Configure and Manage Multiple Account with Windows Live Mail by [Neha](#)

Article published on March 5th 2012 | [Software](#)

Windows Live Essentials that hosts a set of features including Mail, Instant Messenger, Photo Gallery, Movie Maker, Writer, etc. in the new avatar 2011 evolved after a series of development. Once started as a standalone e-mail client, the application has gone a complete makeover, and if the rumors have their way then Windows 8 will witness an advanced Microsoft communication suite, with an ability to bring all POP3 and non-POP3 accounts, and contacts from social network. It would be compatible to connect with calendar of friends, co-workers, or family members who have a Windows Live ID.

Extension of features doesn't amount to deny the importance of the product as an email platform. Streamline and manage electronic communication from other important servers with Windows Mail. Receive, read, and respond to mail from other email accounts with single Windows Live ID. Email providers, such as Gmail and Yahoo! Mail Plus, offer POP3 access (a standard protocol for receiving email) and let you forward mail to another email address. You can configure the settings of the desired mail service provider so as to divert the incoming mail to desired POP/IMAP address at Windows Hotmail. Also, amend required changes under the Windows Live Mail ID to receive/transmit mails from or to the desired mail server. For non-POP3 accounts add a folder under the left navigation bar and perform changes under the "Options" tab followed by "More Options" then "Manage Rules". Messages that are sent directly to the address of your other email account will be received by this folder.

Issues related to email send/receive, attachment, attached links, Mail search option, and others are quite common. At times, account may be blocked or compromised. Software conflict and browser incompatibility can give birth to errors that may say "Account Closed Access Denied" or others. Beginners may get errors with account activation, though temporarily. Microsoft Fix It is an automatic tool that can detect and fix problems. However, if you are unable to get a breakthrough on your own then Windows Live Support is the right dais. Experts can diagnose the settings pertaining to the account, computer security, browser and more as per requirement. In case of compromised account, immediately change your password and secret questions. Afterwards, install a compatible Internet security software and amend Windows Firewall settings that can collectively check phishing email messages, and automatically scan attachments and downloads that are potentially harmful.

Following a few Internet norms, like using strong password, installing Windows Updates, ignoring suspected emails, avoiding use of public computers or unsecure wireless networks, etc. you can stay away from bad-guys. Add more secret information to your account so that you can easily recover it whenever it has been compromised. Sign in with your Windows Live ID and Under Password reset information, click "Add" next to Email, Mobile phone, Trusted PC, or Question, and then follow the on-screen instructions to add the desired information that you would like to be asked for when required. Taking help of Windows Live Help Forum is a good idea to overcome related issues. Here you can share your problems and solutions both.
