Data Center in Mumbai: for Your Online Business by [Abhijit Mandavkar](#)

Article published on January 13th 2012 | [Software](#)

Web Werks is a leading Indian datacenter solutions provider offering data center colocation, managed hosting, managed services and cloud solutions from Mumbai to all over the world. With our company, you can leverage best-in-class network and cloud providers to optimize IT performance, simplify your operations, and gain flexibility. Our data centers are designed for the high availability using state of the art design and construction methodologies.

With the rapidly changing world of IT infrastructure hosting, managed services, and virtualization, you will find a relatively less number of data center providers who provide a similar kind of infrastructure or service quality. Going for an expensive, disruptive and sometimes even non-affordable hosting solution might not be an effective solution for you. Being an operating hub for network service delivery, your data center demands 'best-of-breed' technologies that support the mission critical environment. To be competitive, cost control is very much important but you can't afford to sacrifice the performance of your WAN and applications.

We meet all the technology, expertise, scalability, flexibility and control that companies require from our Tier III, SAS70 Type II compliant data centers. At Web Werks, we can fulfill any of your requirement whether it is a simple 1U server to full cabinets. Simply choose the space, power and bandwidth you need and let us take over from there. We strongly believe in delivering solutions to our clients instead of just selling them a product.

Our data centers are located at the heart of the city Mumbai, India. Thus, because of our limited exposure to natural disasters, our data centers are much safer for you to store your data. Our company offers enterprise level data centers to provide a flexible and scalable foundation for the best in reliable, cost effective and secure ICT and Internet infrastructure. We offer tailored made solutions to your requirements, with a positive and flexible attitude in meeting your needs and contributing to a rewarding relationship.

Thus our company Web Werks manages one of the largest and most sophisticated hosting infrastructures in the world. At Web Werks, our aim is to deliver datacenter services without any compromises with premier facilities, skilled staff, flexible solutions and a passion for quality support. Our data centers are designed to keep customers' sites up and running with all their users connected. We have highly skilled data center management professionals all the time to handle situations that may arise or help our customers.
