Introduction:

In the world of learning, where education plays a critical role from centuries to centuries and passed of many generations and trends its still been improving day by day. The source of education has been to many forms and styles where each country follows they own education system. But the most common and latest one is E-learning. The main idea of this system is “You can learn where ever your”.

Its been the latest trend followed by many educational institution and universities in the world. The motto behind this system is a person can learn anything with its own individual knowledge and the information he/she gets from the system without depending on any one to teach. In these way of learning a person does not under go any stress or pain, its a way of individuality to learn from the information and data™s given. And can read anytime/anywhere from the place where they are with fresh minds and ideas which can excel them in betterment of they learning.

What is E-Learning?

A learning process through electronic means is called e-learning. This involves online learning and training through internet or intranet or any other technology means. E-learning mainly includes the use of electronic device such as computers, laptops, tablets, mobile phones etc.

Some of the approaches used in e-learning services are:

- Computer Based Learning.

- Computer Based Training (CBT).

- Web Based Learning.

- Web Based Training (WBT) or Internet Based Training (IBT).

- Computer-supported collaborative learning (CSCL).

- Technology-enhanced learning (TEL).

- Virtual Classrooms.

- Digital Collaboration.

History of E-learning:

In the mid of 20th century, for the first time a new word e-learning was introduced by CBT systems in a seminar in Los Angeles. It was associated with the expression online learning or virtual learning. It had a great start up in beginning of 1990™s and under gone a great hype in mid of 1990™ to 2000. Where many students and institution started to use these system by the end of 21st century it has become a standard and realistic one to be used in educational system and technologically too. Many companies these days are offering E-learning development and sources as per the needs of people. And it as been one of leading and matured market in the tech world.

Uses of E-learning:

E-learning has been used tremendously in educational areas especially in colleges and schools where students can learn on their own and get many ideas, and much more information on the same topic. It can also effectively improve the efficiency of students and bring their own pace among others.

It helps disabled people who have their own liberty to learn and work. It's one of the beneficial methods to be thought practically and excel on it.

It's also used in medical education where students have to carry very large books and these books are blended into e-books and used well, where the data are stored permanently and carried with them.

Advantages of E-Learning:

- Reduces travel cost and time.

- Learners may have the option to select learning materials.

- Learners can study wherever they have access to a computer and Internet.

- Self-paced learning modules allow learners to work on their own pace.

- Different learning styles are addressed.

- Development of computer and Internet skills.
