End Directory Sync Issues by Exporting Email from Outlook 2010 to Lotus Notes by [Herry Parker](#)

Article published on January 18th 2012 | [Software](#)

It is very common to encountering directory synchronization issues while you are using MSÂ® Outlook and IBMÂ® Lotus Notes in single setup. The smooth usage of two emailing client is not difficult if you have an efficient and advanced solution to maintain a proper synchronization between all the elements of Outlook and Lotus Notes. Generally, such issues originate due to directory synchronization failure between Outlook Lotus and Outlook. By exporting email from Outlook 2010 to Lotus Notes, these issues can be easily shortened.

There are many more issues that sneak in accidentally; these issues can be reached to heavy data loss situation, if not handled with care and attention. Beneath mentioned notable points for accurate directory synchronization:

â€¢ The foremost point is the user must verify that the mail flow is proper or not, it is required for flawless database synchronization.

â€¢ The Connector Services must be checked with Control Panel Administrative Tools Services, check Exchange Connectivity controller and Exchange Connector of the Lotus Notes application to verify smooth execution of services.

â€¢ The noteworthy point is keep your diagnostics logging turn up always. If you are using Exchange Sever 2003 or 2000 then turn up LME and NOTES logging feature.

â€¢ Check import and export options.

â€¢ Insure only single Microsoft Exchange Connector for Lotus Notes is handling the directory synchronization.

â€¢ Ascertain Foreign Domain Sync Allowed is settled to Yes for Lotus Notes.

â€¢ The recipient policy of Exchange Server must be executable.

â€¢ Verify Exchange users have the valid addresses in Lotus Notes.

â€¢ Ascertain Target Notes Name and Source Notes Name services are in running mode.

â€¢ Run a command line to extract the details regarding directory synchronization failure.

â€¢ Prefer usage of tested configuration. Exchange connector of Lotus Notes uses APIs provided by Lotus Notes emailing client means this connector is directly of pre-conjoined functionality of Lotus Notes.

â€¢ Directory synchronization issues can also be shorted by downgrading Lotus Notes email client.

After following the above mentioned measures, still you do not get proper directory synchronization between Lotus Notes and Outlook.
