Getting your Gmail messages in Microsoft Outlook by [Staven Gumz](#)

Article published on December 15th 2011 | [Software](#)

Connecting your Gmail to Outlook may be easier than you might think. There are several advantages to making a Gmail Outlook connection, one of which is that Gmail in particular works very well with Microsoft Outlook for a cleaner, less troubling connection. Of the many free email services out there, Gmail is the best known, and it can connect you to Outlook simply and for free.

While many free email services can be used with Outlook, such as Yahoo and Hotmail for example, getting Gmail and Outlook working together is generally simpler and with fewer issues. While Yahoo allows you to connect to an Outlook program you must upgrade your Yahoo account to a version where you pay a small fee. Going Gmail to Outlook requires no fee and is fairly simple to accomplish.

What makes getting your Gmail in Outlook relatively simple is that while the instructions may seem long, they actually walk you through the process simply. You do not need any special knowledge or advanced skills to set up a Gmail Outlook account. All you really need is just a few minutes and to combine the best free email service to the speed and convenience of Outlook.

Gmail does have several advantages as well, starting with the very large size of the storage you get to hold email, attachments, and other items you receive. Plus, Gmail is part of the Google network where you can launch a search easily and connect via your Gmail if necessary. This can be a powerful tool when used in combination with other Google resources, making you more efficient on the internet.

Going Gmail to Outlook means you can send and receive messages through the Outlook program. Often using such a program will mean that you can create a response email faster. For example if you are on a particular site that uses Outlook for their contacts, you can click on the link and write an email knowing that any return message will go to your Gmail account. This saves time and effort since you don't have to copy and paste an email address while going to another account.

And for those concerned that going Gmail to Outlook might include some of the advertising that Google is known for, rest assured that you will only see the ads when you use your Gmail account on your web browser and not when going Gmail to Outlook itself.

Setting up a Gmail Outlook account is simple, straightforward and generally superior than using other popular free email services. The advantages include a streamlining of time that you otherwise spend accessing different websites and copying, then pasting email addresses in order to send a message. With Gmail Outlook the process is very straightforward and simple to do.

For one of the best ways to speed up your email services, going Gmail to Outlook is free and easy. Try setting up your Gmail Outlook connection today and see just how fast you can now send emails.
