Do you have a USB flash drive and how you make use of it? It's well known the most common usage of a flash drive is to transport and store files. Apart from these basic functions, what else can you do with it? Actually, you can convert the USB flash drive to a Windows 7 password reset disk, thus save you out of the trouble when you forgot Windows 7 password.

How to do the amazing trick? Read the following text.

Things you need to prepare:

1. A computer that you can access with administrator privileges
2. Rekeysoft Windows Password Recovery professional
3. A USB flash drive

How to create the disk:

1. Download and install Rekeysoft Windows Password Recovery professional in the accessible PC.
2. Insert a USB flash drive in computer and run this application.
3. Select your target USB drive and start burning.

Note: Please backup your important files stored on USB flash drive, otherwise it will overwrite all the data on it.

4. Click OK when the burning task completes. Now a bootable Windows 7 password reset disk is created.

Note: Unlike password reset disk created by windows built-in features, this disk can be created at any time, even if you have forgotten windows 7 password.

How to use the disk:

1. Insert the disk in you inaccessible computer.
2. Start computer, at computer logo screen, check the key for Setup, and press that key immediately.
3. In BIOS screen, use arrow keys to move to Boot tab, and set USB flash drive to first boot device, press F10 to save and exit it.
4. The computer will boot from the disk, and will list all user accounts on the computer. Select your target account, click reset button, then its password can be reset to blank. (In enterprise version, you can change the password to a new one)

Actually, this Windows 7 password reset disk not only works for windows 7 system, but also supports windows XP/vista/2008/2003. That is to say, as long as you forgot windows password, you could use the disk to reset windows login password.
