Article published on November 28th 2011 | Software

A VOB file is used to store data of MPEG2 format, mainly for DVD disc, including its video, audio, subtitles, menus, buttons, etc. It is a little complicated about the structure of a VOB file. So you absolutely need a handy and intuitive VOB editor video editor to make DVDs and save home movies.

ArcSoft ShowBiz is such a handy program that you don't need to worry about VOB files' inner structure. All you need to do is to import a VOB file and edit VOB file like any other media file. Follow the tutorials to edit VOB movie and create excellent disc.

Edit VOB Files with VOB Movie Editor

Step 1Add VOB movies

Find VOB files through file trees, in both local and portable devices. vob editor can recognize varies of media file format and list all of the formats in "Type" column. Drag the VOB movie clip and drop it on "Storyboard" below.

Step 2Cut VOB Movies

The long yellow indicating line is play-back timeline. Move the line using mouse curse to make sure which frame is the current one. Above previewing window plays the movie in editing area and will stop at the frame you chose.

Use the camera-like button to capture current frame, and use the option "Split" with right-click on clips to cut movies from current frame.

Step 3Merge VOB Movies

Firstly, make sure where you want to insert a clip, or where to merge two clips together. Move timeline to the frame, or play the movie till the frame and stop, and split the VOB file from the frame. Then, drag the clip you want to insert or merge and drop it in the split part. Your VOB video will be played in new arrangement.
