How to Stitch Video Frames for Fun on Mac/Windows by Anatole William

Article published on November 28th 2011 | Software

Generally we make panoramas with photo shoots but have you imagined creating a fantastic panoramic image with video frames? Using videos in Panorama Maker sounds like a rather cool idea, actually, when the camcorder moves, a series of images than can be stitched to make up a scene. It's very difficult to take a photo of an entire play when watching a football match so we use video to record that, since we can create panoramas from videos with the photo stitching software, the resulting would be an absorbing artwork. If you are Mac users, feel free to try panorama maker for mac. Follow the instruction on Windows, and you can take it for reference if you need to stitch video on Mac:

Step 1 Import the video frame for stitching

Open Panorama Maker and drag the video into workspace directly, the program also can automatically identify the media files in folders.

Supported video formats:

mpg, mpeg, avi, mov, mts, mp4, m2ts

Step 2 Stitch the video frame in a few seconds

In accordance with the default stitch mode, click "Next" to enter the stitching interface. Just playback the video and click the icon when you think it's ready.

If you don't do any operation and go into the video stitching process, the video stitching software will handle the entire video rapidly.

Step 3 Get a fascinating artwork and share for fun

Click the icon and select the output format you preferred. You've just learned how to extract images from a video, although the images are of lower quality than photos and sometimes it looks blurred, it's really amusing when creating panoramas in hiding.

Well, everything is done. You've just learned how to extract images from video, next show the amazing creation to your friends and find more fun!
