Article published on July 3rd 2012 | Software

The ABAP training sessions deliver mastery level instruction for project team members and more advanced SAP users. Each ABAP course includes basic instruction, advanced tips, live discussion, demonstration, and hands-on exercises. In addition to our standard public courses, our instructors can provide onsite training that is customized to meet the requirements of your individual project and organization.

SAP ABAP Online Training - Available Courses:

â€¢ Intro to ABAP Programming - Gain an understanding of SAP's proprietary programming language, ABAP. This workshop will include applying the language and tools to develop reports and new UI based transactions. New coding techniques in utilizing Object Oriented ABAP and Dynamic programming are also introduced in this workshop.

â€¢ ABAP Programming - The SAP ABAP Programming course gives attendees an overview of the basic concepts and architecture of SAP ABAP. Attendees will get hands-on experience working with SAP ABAP, including how to design and create performance-optimized programs. Additional topics covered include: the new ALV object model, tools such as tools such as the SQL trace, Debugger, Code Inspector and runtime analyzer, Unicode conversion, graphical display and Dynamic Documents, generating output using charts, understanding RFCs, and the Enhancement and Switch framework.

â€¢ ABAP Dictionary - This ABAP training course will give attendees a clear understanding of ABAP Dictionary. They will leave knowing its functionality, scope, and role within an organization.

â€¢ ABAP Objects - The ABAP Objects course will help attendees understand the fundamentals of Object Oriented programming in ABAP which details the Design, Development and Use of ABAP Classes and interfaces, focusing in on Global Classes and Interfaces from design to usage.

â€¢ ABAP Web Dynpro - This SAP ABAP Web Dynpro course will help attendees understand Web Dynpro Components and Application design in detail, including the development considerations for using ABAP Web Dynpro to address web application requirements. Includes a solid foundation on what is available with and without programming when creating ABAP Web Dynpro solutions.

â€¢ ABAP Workbench - This ABAP course will provide a solid foundation in ABAP. It covers Workbench tools, and creation of application programs with various dialogs.

The job market is more relaxed comparatively for SAP developers than functional professionals.

A beginner can gain so much information through a proper Sap Abap training online and also himself by learning the programming language, searching the scenarios online and networking with people. The functional learning only happens on the job and you cannot do much about it.

You just need that spark, that enthusiasm, and if it clicks for you like many in SAP, you will love your work and will be able to get past the entry barrier. After getting there, you get due respect for your knowledge in this field and the corresponding pay packet.

There are exceptions for the ABAP approach is not recommended. If you have a strong domain experience like you have years of experience in sales, marketing or accounting, then you should try

to capitalize on that experience and try to find ways to enter the relevant areas in SAP.

In general, I believe the easier way to get into SAP is through SAP ABAP in comparison.

There is a pre-requisite though. You should have knowledge of a programming language â€“ any language for that matter. The reason behind this basically is you understand the general structure and features of a programming language and how it works. Itâ€™s not important whether you have worked in a IT job but working IT professionals naturally have an edge.
