Article published on January 23rd 2012 | Software

Customers around the world enjoy hybrid apps on their smartphone, one often wonders how are they designed and developed. Mobile Application Development firm scatter all around India have developed an infinite amount of apps for the handheld devices with interactive and informative features. Expertise in this domain has are being developed by every Organization due to enormous market potential for such Application. User Experience (UX) is the most evident factor for enterprises leveraging the software solution for a SmartPhone. A decade back the term Mobile Application Development has a different objective. It has come across numerous challenges for its usability and systematic measurement methodologies (SMM). With continuous efforts by the technocrats and standardization in security requirements has brought a revolutionizing phase in this era of developing apps for the smartphone. Competition is also increasing day by day as mobile players are providing enhanced features and application capabilities to its users which lure them greatly.

SmartPhone are being controlled by Mobile operating system (mobile OS), android is an operating system developed by Google and iPhone mobile OS are the most modern and popular mobile software available in the market and this is developed by Apple. Android and iPhone applications development have neck to neck competition and these capturing the market like no other player in this space. iPhone application development and Android application development ensure rapid application development for smart phones to give its users what they want be it business application like Email, Office, Document readers, Messengers etc. Be it entertainment applications, games, sharing photos, music and console games.

New communication technologies like 3G allow mobile application development programmers to develop high performing and heavy applications like GPS navigation, Maps etc which was a challenge earlier due to bandwidth and speed issues. There has been a great advancement in over all communication and mobile system. With the advent of technologies like Android and iPhone increase in user base of mobile users throughout the world, mobile application development is considered as key differentiator in providing competitive advantage to the enterprises ruling the market in the field of apps developments usually develop software solutions that run comfortably on Android OS or iPhone OS.

Android Application Development technocrats are developing and deploying apps with real times updates for head held devices like; keeping a check on your health has become easy with apps containing algorithm which helps customers to check updates on health information, seamless communication on variety of social network, transmitting information was never that easy and secure . An IPhone Application Development firm develops apps that encourage customers to think beyond basic mobile function.

Tablets, SmartPhone, mobile devices have become a sense of necessity for a modern man, they are no longer used just for voice all, the bridge has been crossed. Communication through email, Web mail browsing, advance GPS, Capturing information around the world, Mobile banking, Interactive GUI, documents storage supported for Microsoft office, personal digital assistance (PAD) devices and above all Social networking. iPhone Applications Development firm are bringing gamut of apps developed using robust framework, latest mobile dashboards apps combined with cloud technologies are proving to be more beneficial for the customers.
