Organize Personal Folders PST Size Limit with External Tool by Stephen Charles

Article published on July 9th 2012 | Software

Everything has a limited space, for instance a glass has certain volume you cannot fill it more than its capacity and if you try water will spill from it, which is problematic. Same is with Outlook email system, it is very useful email managing client that provides elements like messages, tasks, appointments, to do list, tasks, journals, etc. Outlook by default stores data in Outlook.pst file. This file has different file size limit in both formats ANSI and Unicode. ANSI Personal folders PST size limit is 2 GB and 20 GB in Unicode.

Where Problem Appears?

The main problem appears when ANSI PST files goes beyond 2 GB and Unicode goes beyond 4 GB, PST file began to slower down in normal functionalities. This change in Outlook behavior might astonish you, but it is a clear signal of issue with PST file size limit.

ANSI Outlook reaching 1.5 GB start operating slowly, you slightly experience the difference in sending and receiving emails. Unicode reaching 4 GB becomes slower which directly affects Outlook emailing operations

Why Problem Appears?

File size limit you might have heard a lot of, it means that you can store data (messages, tasks, calendars, appointments, to do list, journals, etc) in Outlook PST file till 2 GB in ANSI and till 4 GB in Unicode. When you try to overload data in PST file against its set limit, you fall in grave serious problems like it can lead to non-usable state of PST file.

How to Overcome Problem?

In the presence of superior technical solutions you can find an easy way to split personal folders PST size limit. If you want most simple solution where you do not need to spend your time, physical labor, useless pains etc, then adopting a way of professional application would be the best possible solution. It is not easy to get desirable external software to split large sized PST files.
