SharePoint Technology-The new upcoming share sensation by Anil Sharma

Article published on February 6th 2012 | Software

After the immense success witnessed by Microsoftâ€™s PowerPoint, Excel, Outlook and many more, Microsoft has now come up with another world-class invention, Microsoft SharePoint, adding another chapter to the world of computer science and information technology. Let me share with you some details about SharePoint.

SharePoint is an information portal, web-based; from Microsoft which can be arranged in a particular way to operate intranet and internet sites. Correctly implemented and operated SharePoint systems can bring huge benefits to your company in collaboration. It is simpler for groups to come together. People can set up sites to distribute information with others, deal with documents from beginning till end and helps in making better decisions.

There are various intranet solutions in the market. Though, if you are in search for a good intranet based SharePoint solutions, you must try out SharePoint Intranet. It looks like they have put in a lot of time on its usability and have also taken good care in filling gaps that would, otherwise, not come into notice unless one starts implementation. They provide project and department sites installation, custom home site, training and configuration. SharePoint Intranet has got a lot of appreciation and success. It is rapidly becoming a standard for corporate intranets.

Microsoft SharePoint Project Management is the best for project management but many corporations donâ€™t realize its potential and use it merely to share spreadsheets or documents. With the introduction of SharePoint Project Management you will not only be aware of how to use potential and common project management theories in SharePoint, but also understand how to create an information structure in accordance with your project to coordinate communication and cooperation among group members efficiently.

SharePoint Custom Development assists in quick delivery of applications in three different ways. Firstly, with some customization of the human edge, SharePointâ€™s differently new applications are suitable for a number of situations. Next, SharePoint Custom Development offers services involving social media, collaboration, workflows, information distribution, website creation, search and reporting and document management which lead to speedy completion of projects. And lastly, you can assign workflows and simple sites and content updating as well.

Most corporations have accepted that SharePoint Knowledge Management helps in achieving advanced knowledge about management. Documents, once formed, can be categorized and captured. Microsoftâ€™s Enterprise Search, along with SharePoint, allows users to search documents in spite of their storage location. Veteran SharePoint users are on familiar terms with SharePoint Knowledge Management and know that it is a remarkable knowledge management environment after documents, with the correct data, make it into the correct place.

Debatably, one of the reasons behind the enormous success of SharePoint within the past few years is the network of third party developers and products that assist in supporting it. Casually speaking, if one wants to enhance or enlarge the accepted SharePointâ€™s features collection, there are goods or plug-ins that does the job perfectly. Visual workflow blueprint, plenty of weather web-parts and high level backup for documents- everything can be easily and readily added to any SharePoint environment.
