Tips to Speed Up PC Performance by [Donald Miller](#)

Article published on May 10th 2012 | [Software](#)

Every day the internet offers new software, new programs for PCs. People using PCs have picked up a usual trait to the performance of a PC by installing many software programs. Today, in every PC, you may without difficulty find abundant software installed. However, the important thing to note here is that installing cleaner programs for computer and security programs many a times slows down the overall performance and speed of the PC rather than speed up PC performance. Some PCs have more than one antivirus programs installed. This may look like one is trying to speed up slow computer; however, it is a blunder that will without doubt reduce the performance of the system.

It is suggested to speed up PC performance by making use of reputed software that will keep you system up-to-date and fast. It is not a clever decision at all to protect a PC by installing loads of software. Just speed up slow computer software can do the trick. PCs never run smoothly if there is any hardware hitch in your machine. The hardware issue will either freeze the system or make it run in an erratic manner. Always keep in mind that there is no other alternative for a fault in the PC's™ hardware. No software programs can help you in speed up slow computer when there is a faulty hardware. Changing the hardware with faults is the only solution.

Many of us make use of a security program. An antivirus program is the fine example of the same but it is not useful to speed up slow computer. An antivirus program is the usual explanation for any infectivity in your PC. All kinds of malicious programs are removed from your PC by making use of this security software. Many have the misconception that to speed up PC performance one should make use anti-virus software. Rather such programs are often responsible to slow down a computer. Malicious entry of virus through Internet needs to be checked and during such occasions, a good antivirus that can handle malicious programs should be considered. You also need to see if that program slows your system or not. Keep in mind that antivirus software does not speed up PC performance.

One of the primary reasons for PCs running slowly is because of damaged or corrupted registry. For any operating system, registry is the central and integrated part. The entire system is affected if a registry is damaged or corrupted and consequently total speed goes down. To speed up PC performance, reputed computer cleaner software can be put into use to prevail over this problem. This will help speed up slow computer and it will keep the registry in proper condition. Using a computer cleaner program will enable no junk files corrupt or damage the registry, thereby making the whole PC using experience bliss.
