Content Management System (CMS) is one of the most frequently heard terms these days. Since, the world is observing a great demand in online businesses, the demand for open source solutions are also increasing. There are various open source solutions that are present in the market such as wordpress, Magento, Open cart and many more.

Need of these open source solutions came into existence when the people who started indulging in online businesses were not familiar with the technical aspect of it. Using these solutions provides a great sort of help as well as strength in context to their e-commerce websites. Since, these softwares are easy to handle and manipulate, their popularity increased in quick succession. You need not be a software engineer or developer for operating these websites. With basic computer and administrative skills you can easily do so.

One of the emerging names in the field of open source solutions is Umbraco. It is written in c# on the Microsoft Platform and provides the fastest as well as adaptable content management system. Umbraco is one of the most asked for open source platform. Various high-profile websites including one which is built on Asp.Net uses this Umbraco e-commerce solution. One of the most striking features of this CMS is that it can be customized from the scratch as per the individual's need.

The various features which make Umbraco a great choice are:

- Easy Website Content Editing
- Library Services
- Graphic Improvement tools etc.
- Blog Publishing and management
- Website Version control for extra security
- Scalable CMS that grows with your website

Umbraco contents are all under control version and the routines of publishing are exemplary. Umbraco is a user-friendly, customizable and easy to choose management system. Umbraco CMS is widely used and it's amongst the most reliable CMS and E-commerce solution. It inherits all the important traits of an Open Source E-commerce solution.

Flexibility and reliability has been a great add-on for this CMS system. Thus there will be some unique features that Umbraco website will be able to perform such as data collection, reporting tools, quality blogging software, dynamic form building, image galleries and many more.

This CMS is compatible with IIS6 and above. Being developed on windows platform it uses SQL 2005/2008 as its backend platform. Thus, SQL being a part of its backend make it quite efficient solution.

So, coming to the end of this discussion, those who are looking for a CMS as well as E-commerce solution for their online businesses should opt for Umbraco. There are various web design and development companies providing the Umbraco development services at very reasonable prices.

Choosing the right company is completely your decision.
