Are your front-end and back-end functions well integrated? Imagine two people trying to carry a rolled up carpet out of the room, but neither of them pays attention to what the other one is doing. As a result, they end up knocking off one another or walking off in a totally different direction, dropping the carpet. You don't want this to happen to your business operations, do you?

If you want to stay competitive in your industry, you need to make sure that you utilize the latest IT infrastructure that will not only keep your small business at par with other businesses but will also give you an edge over your competition.

With your front end and back end properly integrated, you can ensure improved productivity and business efficiency. In addition, B2B Ecommerce Software helps small businesses in a variety of ways:

1. **Administrative:** With built in reports for orders, inventory and products; it is easier to track the product performance and best selling products in the product catalogue. As a result, you can take real time decisions and maximize benefits from powerful B2B ecommerce resources on the Internet.
2. **Back End Systems:** Online business software works as an internet gateway for your vendor management, orders, shipping and logistic systems. By extending your back end systems to the web, you are able to avail online marketing, sales and payment functionalities that improve your customer experience multifold.
3. **Integrated Web Solution:** Using B2B ecommerce software offers you more flexibility at reduced operational cost. You can access your back end and front end from anywhere you want without investing thousands of dollars in a full scale ERP system. You are able to utilize in store through retail POS software along with online channels.
4. **No Technical Knowledge Required:** Often extensive ERP systems require in-depth knowledge and training before you can even start using them for your business operations. Using online B2B software is very easy and intuitive so you don't have to invest a lot of time and energy in learning a completely new system.
5. **No System Management, No Worries:** One of the biggest drawbacks of using stand-alone ERP systems is that you'd need to take back up of your system from time to time, otherwise you risk losing your business information. Thanks to regular maintenance, online e-business software is absolutely safe and you'd never have to worry about taking back up. You can be sure that all business information is safe and available in real time.

Using online B2B software also gives your small business a professional image and help in raising your sales. You can easily manage your back end systems and make positive business decisions that can prove profitable for your ecommerce business.

The best part is that most of the online business software solutions are integrated business management suites that are specially designed to be interoperable with popular third party products like QuickBooks and MS Office, making it very easy for small businesses to retain existing business solution investments as well as to integrate online business software without any hassles.

So, what are you waiting for? Get competitive. Get integrated business software solutions for your

business today!
