Where to Download Free Ares?

Ares is one of the most popular file sharing programs today, thanks to its array of useful features and tools. Free Ares Galaxy makes it easy and quick to find files and, depending on your internet connection, lets you download them at impressively high speeds. All this comes in a user-friendly, intuitive interface.

But where should you download this powerful program from? Because Ares is an open-source program, anyone can use or distribute it. You should never pay for the Ares music file sharing program, and any site asking you to pay for the software is running a scam and trying to profit off individuals who aren't well informed about free Ares. There are many different sites offering free Ares for you to download. However, before downloading anything onto your computer, you should always be careful that the download comes from a reputable source. You don't want to download a file you think is free Ares only to realize that you just gave your computer a virus--leaving you without Ares music and without a working computer!

Sites devoted exclusively to free Ares downloads are your best choice to get started with Ares music downloading. Look for a site that seems well informed about the Ares music program, with information about free Ares and help on how to use it.

When searching for a site from which to download the Ares music file sharing program, you might also want to look at the resources the site offers. If you experience a problem with setting up Ares or downloading Ares music, you should be able to turn to the site you downloaded from for help. Most sites offer little or nothing in the way of resources besides hosting free Ares itself, but some distinguish themselves by providing help for users--this could range from something as basic as an FAQ to actual user support teams. Some sites go above and beyond when it comes to free Ares user support, offering 24/7 live support via chat. We recommend Ares.org for your free Ares downloads.

The safety guidelines mentioned above go for files you download using free Ares as well. Be careful about what you download, because files aren't always what they seem to be or are labeled as. It usually isn't possible to know where your files are coming from or how reliable your source is, because free Ares music is passed from one user to another, rather than through a website. So the best way to protect yourself from viruses and malware is to enable Ares' built-in security filters.

To do this, open Ares and click on the "Control Panel" button. Under the "Hashlinks" tab, make sure the box for "filter executable files and potentially dangerous file types" is checked. This filter prevents .exe files and other kinds of files from showing up in your Ares search results. Executable files are often viruses disguised as free Ares music or other media. Keep in mind that enabling this filter will also prevent many program files from showing up in your search, so if you want to download a program using free Ares you will need to temporarily uncheck the filter. Just remember to be extra careful about what you download when the filter is off. Furthermore, you should make sure to have anti-virus software running on your computer if you are going to do much downloading of any kind.
