Why You are Trouble with Windows 7 Password Reset? by [Mollazen, A Windows Password Recovery Tool Provider, A Regular Writer On Software.](#)

Article published on December 3rd 2011 | [Software](#)

The Windows password is a security measure that keeps unauthorized users from using your computer. Your computer prompts you to enter it each time before logging on to Windows. If you forgot Windows password and are unable to logon to your computer, you can reset it and create a new one using a quick and simple process. Just take Windows 7 for example, we Windows users are always puzzled or confused with Windows 7 password reset trouble, which makes them can do nothing with their games or unfinished papers. But why you are in such a condition? The reasons maybe like this:

Firstly, when you created a Windows password for your pc security, you must forgot to create a password reset disk which always plays an important role when you need to do Windows 7 password reset. So, it is very necessary to create a password reset disk for your PC which can lessen a lot of trouble.

Secondly, I think when setting a password, you have ignored with the password hint. As we know, password hint is minder to you of how you made up your password. Some systems let you enter a password hint so that if you forget your password, the hint will be displayed to help jog your memory. For example, if your password is your child's birthday, you might use "Lucy" or "Jim" as a reminder.

Note: It is not a good idea that you make the password hint the same as your Windows password.

Thirdly, you must created another more available admin password if you are the owner of the PC. Once you accidentally forgot the admin password, an available account with administrative privilege can help you do Windows 7 password recovery easily.

Of course, if you haven't a reset disk, password hint or another available admin account, still do not worried about and frustrated. There are many a Windows password recovery tools in the market, which are professional and worthwhile in Windows 7 password reset, like Windows Password Unlocker, Ophcrack or PC Login Now etc.

Well, on one hand, the password-protected measure keep our data and privacy security, on the other hand, it is a vital problem that if you forgot or lost Windows 7 password. Then how reset Windows 7 password in a right and quick way?

Measure 1: Windows 7 password reset with CMD Command Line

If the computer is configured for local user authentication, passwords can be reset either through the graphical user interface or on the command line. Use the Windows command line when you need to quickly reset local account passwords.

Step 1: Login to the Windows 7 computer using the credentials of an account that has Administrator permissions.

Step 2: Click the "Start" button on the Windows 7 desktop and then click the "Search" box. Type "cmd" in the "Search" box and tap the "Enter" key.

Step 3: Type "net user account_name new_password" except replacing "account_name" with the

name of the account that requires a password change and replacing "new_password" with the new password that you wish to assign to the account.

Step 4: Press the "Enter" key.

Measure 2: With the Help of Windows Password Unlocker

There are so many Windows password recovery tools in the market which help us to reset the forgotten Windows password. Just input "how to reset Windows 7 Password" in google search, you will find Windows Password Unlocker, a well-recognized and professional software to help your Windows 7 password reset issue with less than 5 minutes.

Now, it's time to reset the password with the top 3 methods and you can select one of the most suitable for Windows 7 password reset.
