Article published on July 18th 2012 | Sports

Now the end of the day does not mean the end of your volleyball match! All you need to do is purchase the light up volleyball to play throughout the night. These light up volleyball are very much like the usual, inflatable soccer balls, which are prepared of a fiber-toughened rubber-like polymer material that permits light to be transmitted to the exterior of the ball. They have a bright LED light within the ball that lights up all the orange panels of the volleyball so that you can see the ball at night even in the absence of overhead lights. The switch provided for illuminating the L.E.D. is drawn back to avoid turning the light off while the game is still on. You can easily replace the batteries simple by replacing them with new ones.

These light up volleyball requires three LR44 watch batteries to power up the ultra-bright LED light provided inside the soccer ball. A single set of batteries can light up the soccer ball for a long time. Usually a new set of batteries are provided with every new soccer ball. However, it has been recommending by the various companies selling light up volleyball that the customers should also buy an extra pair of batters always. This shall be beneficial to you as you can replace them with the original batteries immediately without waiting to buy new once, once the original batteries have exhausted.

However, there is one single difference between the standard volleyballs and the light up volleyball. The standard volleyballs are made of soft leather, and has a padding under it, because of which they are soft and do not sting too much when they are volleyed. Light does not pass through this extra padding, because of which the light up volleyball do not have either one of them. When these volleyballs are completely inflated, because of the absence of padding the volleyball may sting a bit more than the normal volleyballs.

Like the light up volleyballs there are also a number of other light up sports balls available in the market which function in the same way. As they contain bright LED lights these game balls, can be effortless seen, and comes with long lasting batteries. When the batteries finally exhaust out, they can be easily replaced and are easily available at ant sport store or a hardware store. These game balls are available for a number of games for example light up basketball, light up baseball, soccer ball, as well as light up scoop ball. They are all standard sized, sturdy, as well as made for genuine sports use. However, be aware as you can easily confuse this light up game balls with the cheap lighted balls available at a toy shop or flea market.

As a customer when you are intending to purchase a light up ball it is important that you should first understand the difference between a led light up ball and a glow in the dark game ball. The truth is that glow-in-the-dark and LED are not similar concepts. Glow-in-the-dark sports ball needs to be exposed to light to let it absorb light before it emits light whereas LED lights are battery-powered which can remain lighted for long hours.
