Article published on March 22nd 2012 | Technology

If you have a camera, then you are definitely aware of the fact that camera batteries do not last for a long time if they are not kept and maintained in a proper manner. Majority of the camera batteries have a short lifespan and hence, to increase the longevity of these batteries, you need to keep certain tips in mind. Today, there are some cameras which use rechargeable batteries and others which use disposable batteries. The types of rechargeable batteries available today include lithium polymer batteries, nickel cadmium batteries and lithium ion batteries.. So in order to make them last for a long time, quickly check out the points mentioned below.

â€¢ Not all features of a camera consume the same amount of power. So by knowing which feature or function of a camera consumes maximum power, you can avoid using that feature or function when it is not required.

â€¢ There is a misconception among many people that charging a camera battery too often reduces the life of the battery. However, this is not at all true. You need to charge them at regular intervals whenever you can in order to increase the life of the battery and improve its performance.

â€¢ Finally, if you are out for a shooting session and do not know how long the session will continue, it is advisable that you carry an extra battery with you so that you can charge the battery when the charge is totally exhausted and use the extra battery that you are carrying with you in order to continue with your shooting session. So just keep these tips in mind and continue capturing some wonderful moments with your camera. Always remember the fact that a good battery should be environment-friendly, durable, and should have a good battery life
