Maintenance of Camcorder Battery- a Discussion by Julia Roger

Article published on February 16th 2012 | Technology

Almost everyone likes to capture the lighter moments of life which revitalizes your mood when you go down in dump or go into a reclusive living. Camcorders have become a part of our life and in fact, we can term as the third eye which stores these beautiful moments in its memory for us. Worst happens when we see that our camcorders are left with zero charge and we need it instantly. And so if you want to take care of your equipment, it is advisable to care for the camcorder battery as this small part forms the heart of your device. Most of the camcorder batteries are Li-ion and as so, if you possess a little knowledge about them, it may serve you fruitful while carrying out maintenance of your camera.

Generally, a new camcorder battery comes in discharged condition and hence before using it for the first time; you need to recharge it fully. It may happen that the new battery did not sustain its charge for long but there is nothing to worry as you can see its real performance after a couple of re-charging cycles. Many batteries also drain out their charge after prolonged period of non-usage and hence prior to use,, it is always recommended to charge it fully.

The life of your camcorder battery depends on it usage. In case it is not being frequently used, you can fully discharge it and charge it, thereby extending the life of the battery. Moreover, you should remove the battery from the camcorder and keep it in a cool and dry place, if you are not using the device for quite long time. Indication of warming up can be noticed in times of charging and this is quite normal, hence you should not feel worried..
