Plug Adapter That You Need While Traveling by [Julia Roger](#)

Article published on December 19th 2011 | [Technology](#)

If you have a device that is not being used because it does not fit well in the plug point and the socket, you can try out plug adapter which will make it work. plug adapter has nothing to do with the system of your appliance or any other electronic devices. It just changes the plug configuration of your devices so that it can match outlets and it is a great thing to carry if you are travelling abroad.

The voltage flow of one country may be different than another country which may not be suitable for some appliances. The adapter is a joint that adapts the system of the power point and convert it to the required power flow for the appliances in use. But this cannot convert the voltage. You may need to have a voltage converter if you need to change the voltage too. You can find both grounded and ungrounded plug adapter with different specifications.

A travel adapter, it is even possible to charge a notebook or a PC because an USB port can be easily attached to it. You do not need to complex power converter any more. It is small thing and quite cheap compared to the hazards that you may have to face otherwise

You need to the adapter which is specific for the country you visit.

The plug adapters are not at all expensive and it may also come with power stabilizer that saves you from some electrical hazards. There are many companies which sell the adapter. You can also find them online from online stores.
