DeWalt batteries makes among the better ones to use. During the charging process, as the rechargeable battery reaches full power capacity some of the energy converts to heat. A battery in good condition should become warm to the touch at this point, but not become hot. If you have a Dewalt battery that gets hot after a full charge the battery or charger unit has developed a fault or reached the end of its useful service life. The dewalt 18v battery is definitely the most typical cordless power tool battery. They™re typically used to power heavy-duty jig saws along with other cordless tools utilized in the construction industry.

The 18-volt battery pack can also manage hard drilling and screw driving type work and in utilization of lithium ion technology. The DeWalt 18V portable battery system is the biggest system of cord less tools running off of one battery platform in the cordless tool industry. This system is designed for maximum versatility and durability, allowing users to work over 30 cordless power tools off of one battery platform. Dewalt batteries use patented 3 stage charging process. Cycle after cycle, their 18v batteries deliver consistent power and keep going longer versus the competitors™ battery packs.

With DeWalt batteries of lithium ion 18v robust battery packs it can be done over two thousand times. And off course, any 18v DeWalt cordless tool will continue to work with any 18v DeWalt battery pack. DeWalt 18v battery is a low profile battery of just 7 x 3.5 x 7 inches. It weighs only 2.6 pounds which is lower than its competitors. DeWalt 18v lithium ion batteries have a strong and durable case. This ensures the lowest possibility of reducing the battery power during any vibration..
