What cloud storage does for you? by [John W. White](#)

Article published on July 27th 2012 | [Technology](#)

These systems provide storage solutions for businesses as well as easy access for businesspeople on the go.

Cloud hosting services have become more popular in business because they offer secure backups and easy access to information. These solutions are available for businesses in the form of online cloud storage. One of the major benefits to using a cloud service provider is being able to access information from anywhere and use company programs that are stored in offsite servers. This also helps companies stay on track when there are power outages or internal server issues. Global Network Access cloud servers have engineers on site to keep the servers cooled and the power flowing.

The virtual private cloud is an option that many businesses are taking advantage. This has several benefits including eliminating downtime and creating an even more secure environment. The virtual cloud uses the enterprise data center and has the most to offer businesses that value control and speed. Administrators that use these cloud hosting services have access to provision virtual machines and control of the cloud on their own servers. Companies can choose the hardware on the virtual cloud and the machines are powered by VMware.

GNAX uses a colocation data center to store information for clients. Cloud data is stored at one server location in Atlanta and another one in Dallas. This makes sure that information is stored securely and available whenever it is needed. If one server site has a power outage, the information stored can still be accessed from the other location. Online cloud storage gives businesses the security and storage they need to operate efficiently at all times. More information about cloud hosting and the benefits available can be found online at gnax.net.

With over 10 years as an industry leader in the southeast, Global Net Access (GNAX) operates two world-class data centers, AtlantaNAP and DallasNAP, offering mission-critical data center colocation and cloud services. Company provides superior technology solutions to a variety of organizations and industries worldwide.

Privately held with headquarters in Atlanta, GA, GNAX was founded in 1999 and has retained net income profitability since 2003. We are diligent in our financial management to ensure optimal operational support and disciplined growth.

Our plan is to grow continuously by providing industry-leading colocation, cloud services and applications with superior technical support and customer service in a secure, highly available, mission-critical data center environment.

100% customer satisfaction is our goal, which we achieve by providing 100% focus on the customer and providing customized solutions that will meet immediate, as well as future needs.
