Article published on February 2nd 2012 | Vacations

Care is the basic rule to keep your things alive for a long time than usual. The same rule is also applicable for the safety and life of your car. Your car can run for a long more time than usual if you take proper care in terms of maintenance, cleanliness, provide proper storage space, be aware of any problem occur in car parts and drive well.

Let us find out some tips to keep your car running for a long time than usual.

Wash and Wax your car regularly

Remove dirt and dust from your car and clean it daily to prevent the paint from damage. Wash your car properly at least once in a week and wax it once in a month.

Regular Maintenance

Your carâ€™s maintenance radiator, engine oil, anti-freeze or other components may be different from your last car. So follow the car ownerâ€™s manual to protect your car by following the scheduled maintenance. Remember that regular and timely maintenance can keep your car alive for a long term. But make sure that if you need to change any part of the car then replace it when required with the quality product. There should be no compromise with the quality of the replaced part.

Proper Storage Space

Complete safety of your car will be the focus while selecting the garage place. A proper space should be selected where your car is fully protected from excessive heat of the sun, excessive cold in winters, snow, rain, dirt etc. So that the paint remains as such for a long time and your car engine will also be protected to get damage by excessive cold. Garage should be neat and clean. It should be also protected from rats, cats etc.

Drive smartly

Drive smartly means you should be alert while driving that anything unusual is not happening with your car. Any strange noise, smell from the engine etc. Sometimes itâ€™s ok to drive fast but you should avoid driving fast consistently. Accelerating high can put extra pressure on your engine and other moveable parts. And when you stop the car suddenly from high speed to zero then it can wear out your brakes early.

Do not drive unnecessary

Enjoy your annual family trips or long distance trips but eliminate the unnecessary trips in daily life. These short daily trips can be very tough on your car and removing this will give you noticeable results. Complete your all the errands once in a week in one trip. If you can cut your drive 5 miles a day then you can save 1825 miles per year and if you continue the same for 10 years then you can save 18,250 miles which means a lot. And one can estimate that these miles can save almost $4,000 in depreciation, parts and fuel. By doing this will not only save money but also you put fewer load on your car which will increase the lifespan of your car.
