Article published on February 6th 2012 | VOIP

In this competitive era and cutting edge technology, it is become essential for a company to have an effective and efficient communication system to be more successful than its competitors. And to achieve that hosted virtual PBX phone service is the best option for small business organizations to successfully fulfill all their communication needs. The new PBX system provides you with more advance features as compare to old hardware based calling system and helps in saving you lot of money. Another major benefit of Virtual PBX system is itâ€™s easy to install feature and maintenance which is the primary responsibility of the service provider. The method of operating virtual PBX is very easy to use. Your VoIP provider will provided you with a local number or 800, all you need to do is spread the number among your contact list, customers, clients, staff members and you will have all the incoming calls made to your company getting centralized at one place. All needs to be done are that all you clientsâ€™ needs to remember this particular number. Virtual PBX is one of the best communication systems for self employed businesses varying from small to average size set up. All the services are being provided through a hosted server using high bandwidth internet connection or telephone network and all these services are available in the market at cheap monthly rates.

Skilled Call Management features

A Virtual PBX phone system comprises of variety of features which gives your organization a more professional look to outside world. You need not do any of the hard work, all the functions and a service of a regular PBX system is being offered by a hosted server. Hosted PBX virtual phone system operates in the same way as the large business phone service system. It has so many features like call waiting, call forwarding, fax to email, virtual receptionist, caller ID, follow me and find me, music in hold and more.

An auto attendant greets the caller with a previously recorded greeting message of your company, depending on the time of the call. It has the capability to answer several calls at the same time without giving any busy signals to the callers is also possible through this system. The extraordinary call routing service in the system enables to route the calls to different sections or to the consecutive individual telephone lines of the employees, including their mobile phone numbers. This also helps you to manage your business from any part of the world. All you have to do is install this system on your computer and you will be relieved from financial and business related stress. By using hosted PBX virtual phone service in your company, it is possible to provide your customers and business counterparts more effective services without altering your business telephone numbers.

Cost effectiveness of hosted PBX phone service

Initially, PBX systems were very costly and difficult to install, hence it remained an unfulfilled dream for small business companies. But today, thanks to the modern technology, things have changed for the better. Now the companies do not have to purchase and maintain any PBX equipment at their site, because the entire system will be maintained by phone service provider.
