Open source platforms provide web development professionals with an excellent platform for creativity. With small and large businesses making an online presence, it is imperative that there be something different, something unique and something distinguished about your website. This can only be achieved with a wild imagination and a knack of converting it to a working application using the best technologies at hand. Web development using open source platforms provides exactly this advantage over the other proprietary software. Although there are a lot of contradictory opinions about using open source, there is yet a very enthusiastic community that develops supports and secures open source as a web development platform.

Open source web development using PHP and MySQL is amongst the most popular choices. PHP which is pre hypertext protocol uses MySQL as a database and can be used to create creative customizations. It is flexible and scalable at the same time. It provides web development professionals with the source code that is advantageous to be able to fine tune and improve particular software. Open source also allows for easy integration into any hardware changes, as it is easily modifiable.

We at Elite InfoWorld provide web development services using open source platform. Our team of developers have years of experience in open source development. Our developers work in collaboration with you to understand your project requirements and deliver in a timely manner high quality websites. Quality web development is our aim and we focus on getting things right in the first attempt rather than fixing and re-fixing the product. We maintain transparency in communication and provide you with detailed reports at every stage of the project. You can hire our developers on a monthly weekly or daily basis. You can even hire a dedicated developer specifically for your project. This will ensure that you have a specific point of contact for all your queries and receive individual attention for your particular project.

Quality in output is our prime aim and we ensure this with rigorous testing of each website/application. Our team of application testers critically examines the code, functionality and all aspects of the website to ensure that you do not face any issues after implementation. We strongly believe in getting it right in the first attempt rather than re-fixing the code. Our web development professionals are certified and ensure that all the best practices are followed without any exceptions.

Taking advantage of Open source, we can develop a wide range of websites. From small organizations to large enterprises, we create the most apt websites to suit the theme of your businesses. Further, we also have a highly skilled support team where you can call anytime for any queries with your product. Our support representatives are experts too and can assist you with any issues with your website / web application. Customer satisfaction is our goal and we strive to achieve it consistently and deliver flawless services in web development and web design using open source as a platform for clients round the globe.
