Web Developer by [Rajkumar Kaushal](#)

Article published on May 24th 2012 | [Web Design](#)

In this blog we are going to discuss the main points of what a Web Developer is and how we may manage the qualities of a developer if we join this field as a career. A Web Developer is actually a programmer or designer whose basic concern is to design and build your web pages. He is responsible for the development of World Wide Web application and he knows how to run HTTP over a web server. If you are seeking to be a Web Developer, there are many roads open for you. Do not think limited as a developer can work in many different fields and organization.

Every flourishing business organization is planning to have their online website where they could sell their services. These online web pages are available 24 hours a day and 7 days a week and anyone around the globe could access your business pages at anytime. Keeping all these positive aspects in mind almost every big business organization is hiring the services of a Web Developer. There are many ways you can be a website developer; you may either join an organization or work under their name or you can work from home as a freelance Web Developer. In both ways, you will have to work really hard to show that you are a successful developer and you can manage to fulfill all of your client's needs.

In every web developing team there could be single or more than one developer. You will have to learn many basic and advanced software and skills if you want to excel in this field. A person would like to go to an expert rather than a beginner to make his web page so you should always keep yourself updated with new innovations in this field. There are software like XHTML, CSS, and adobe flash player, PHP, Java and many more. Every mentioned software has its own properties and only a person in that field can tell why that is important. Some of the above mentioned software is required for the development of a static web page while some other are needed if someone required dynamic web pages.

There is nothing to worry about as you do not have to attend a school or academy to be a Web Developer. All you need to do is to be learn these skills and you can apply for projects.
