The Internet is an influential medium with million of users around the world and therefore it is a lucrative tool to expand business. It is an easy way to make people aware of products and services and eventually sell them online by giving visitors the opportunity to shop online. It offers users the ultimate convenience and they can shop for products online as they would in an actual department store. For this reason, every business owner is making huge efforts to make his presence online and to attract the attention of people towards his business and increasing his customer base. To attract the attention of the users, a good and attractive website is must.

Website design is the first thing to take care of while creating a professional website. The main objective of website design is to make a website and present the contents in an interactive and attractive manner. Various features, like text, images and others are embedded in the website to make it useful and attractive to the users. Best web design ideas will help you create a website with all information and features.

Some website design ideas are:

DHTML: DHTML is very useful for complex navigation systems and sub-menus. It gives a simple and neat look to the sites.

Flash: Insertion of small Flash animation in some important pages or giving the introduction with Flash will always make your website look attractive.

Eye Catching Graphics: To make your web site stands apart from other sites, graphics are very important.

Use Tables Creatively: Smart tables are recommended to make the web sites look interactive and user-friendly.

Fast Loading: Fast loading web site designs should be opted for by the web designers.

Navigation: Navigation should be simple and clear.

Resolutions: It is advisable to design web sites for all types of resolutions. Make web sites that are browser-compatible and should look good on all browsers.

Fonts & Colours: Professional fonts and colours should be used for the websites otherwise the visitors might just click out of the site.

Don't Clutter: Do not clutter the web page with unnecessary images and graphics. Avoid using large images on the site. Keep the site simple and leave lot of white space, which gives a neat look to the site.

Broken Links: Do not keep broken links on your website. Before uploading the site, always check for broken links.
