Set up your Reseller Hosting Company

by Peter D

Article published on December 19th 2011 | Web Hosting

There are a number of benefits of starting a Reseller Hosting Company. But before we go further discussing about the benefits of this business, we need to understand what exactly this business is and how do you go about starting a reseller hosting business. Reseller hosting is a business that enables a user to resell web hosting services to its clients. A reseller operates by purchasing a reseller web hosting package from a web hosting company. The reseller then goes ahead and further divides and allocates small web hosting plans to end users.

To set up a Reseller Hosting Company, a user first needs to find out a good web hosting service provider that offers reseller web hosting plans. This is because the main web hosting company will actually be the main service provider and the reseller will merely act as an interface between the main company and the end-user. The next step is to find a suitable plan that fulfills a resellerâ€™s requirements. As a number of web hosts have started to offer reseller hosting plans, a reseller has the liberty to pick the most suitable plan.

Reseller Shared Hosting has also come across as one of the popular web hosting packages available in the market. As the name suggests in this type of web hosting a single server serves pages for many websites. This type of web hosting is largely considered as one of the most economical web hosting packages available. In this web hosting plan a number of websites share a single server. As companies do not have to take a dedicated server for their websites, they save on expenses. Reseller Shared Hosting is most apt for smaller companies who wish to save on web hosting costs.

There are number of control panels available in the market that are used for web hosting services. Gnupanel, cPanel, DirectAdmin, Hsphere and Plesk Hosting control panel are among the ones that have established their names in the web hosting arena. Plesk hosting control panel enables a user to set up websites, email accounts and reseller accounts through an interface.

A number of web hosting companies have providing its resellers with Plesk Reseller Hosting packages. Through Plesk hosting an end user is permitted to carry out all administration functions of a website with ease and control. By using a Plesk hosting control panel a user is always protected from various problems and vulnerabilities.
